

PRESS RELEASE

Kanpur, India

Lohia Aerospace Systems-Ground Mobility Division [LAS-GMD]

Mr. Raman Nanda has joined LAS as a Senior Advisor for Marketing for the Ground Mobility Division. Lohia Aerospace Systems designs and manufactures carbon fiber and glass composites for Aerospace and Defense sectors and sees growing demand in the automotive arena. Lohia Group has decided to enter this new frontier, because Carbon Fiber composites are an excellent alternative for steel parts, being much lighter and stronger.

Raman Nanda is a well-known professional in the automotive industry with experience in senior executive positions at the Spanish auto component major Gestamp as Country Head and President for India, and as former President for Marketing and Sales at TataAutoComp Systems, responsible for building business globally.

“I am excited to be on the forefront in this developing global market. As the need to reduce emissions, and to improve fuel mileage and battery range intensifies worldwide, I believe LAS-GMD is uniquely positioned to serve the Automotive market with our two plants in India and Israel” Mr. Nanda said.

Lohia Aerospace Systems has recently completed a new 80,000 square foot facility with a capital investment over \$15 million on the sprawling Lohia Group campus. Anurag Lohia, CEO of Lohia Aerospace Systems, welcomes Raman as the company is undergoing IATF 16949:2016 certification. “We are happy with this key addition to our team and believe Raman’s efforts will reflect well on our future growth”, Anurag said recently.
